# TaaS Integrator: For Global Tax Determination & Compliance

With companies expanding into newer markets, it becomes difficult for them to determine country-specific tax on account of changing tax laws. Businesses need a global sales solution that reduces manual tax calculation with tax changes.

Leveraging over a decade of experience in tax determination and implementation, we have developed a TaaS Integrator framework to help businesses tackle global indirect tax challenges. Our framework enables businesses to connect their on-premise ERP systems seamlessly with SAP Taxation service, to unlock localization capabilities needed for tax compliance. This enables businesses to reduce the tax department's reliance on manual, fault-prone tax data processes by harmonizing tax changes as soon as it comes into effect.

The TaaS Integrator serves as a central computation framework that helps in managing end-to-end tax transactions. The framework bridges the gap in the client's existing tax computation solutions by keeping tax contents such as tax types, tax rates, deductions and exemptions up to date. TaaS Integrator integrates with SAP SD, MM and FI modules in the existing ERP system and employs RESTful APIs to communicate with the Tax engine. The time for tax configuration is relatively lower as it involves simple data field mapping and does away with complex user-exit coding.

TaaS integrator supports the following process areas in staying compliant:

Sales	Purchase	Finance
✅ Sales Order	✅ Purchase Requisition	✅ Accounts Payable
✅ Quotation	✅ Purchase Order	✅ Accounts Receivable
✅ Billing	✅ Goods Movement	

Value Proposition

- Quick deployments - Implementation time is significantly reduced as our ready-to-use framework eliminates the need for complex and time-consuming tax coding

- Customizable solution – Utlizing RESTful services, the solution is configured to meet the client's unique taxing needs

- Flexible model – Centralized tax reporting solution covering over 120 countries with the ability to scale with business expansion

- Ongoing support and maintenance service – Applexus offers continuing support for tax determination and compliance services with onsite, nearshore, offshore and hybrid delivery models

- Deep industry expertise - Our team of experienced professionals have extensive knowledge in configuring and supporting country-specific tax scenarios

- Partnership with industry leaders – We are an SAP Co-innovation and Application Development Partner with over a decade of experience in tax determination and implementation

Solution Highlights

- Global tax compliance
- Elimination of varying tax code configuration with updates in tax content
- Centralized framework for tax determination and calculation
- Minimal maintenance effort
- Reduced manual effort with automated tax determination
- Flexibility to scale with growing business needs
